

HOW TO SET UP React.js with Vite?

Vite is fast and modern build tool for creating web application.

- Fast updates without page reloads.
- Faster and small production build.

Step 1 :-

Install Node.js

Step 2 :-

Create new project with vite

Step 3 :-

Select framework.

Step 4 :-

Select variant (i.e. JavaScript).

Step 5 :-

Install dependencies.

for eg →
(App.js)

We Build a interface using (.css & .js).

```
import { useState } from 'react'
```

```
import reactLogo from './assets/react.svg'
```

```
import viteLogo from '/vite.svg'
```

```
import './App.css'
```

```
function App() {
```

```
  const [count, setCount] = useState(0)
```

```
  return
```

```
  <>
```

```
    <div>
```

```
      <img src =
```

```
      { 'https://(image link) className = "logo" />
```

```
    </div>
```

```
    <h1>Vite + React</h1>
```

```
    <div className = "card">
```

```
      <button className = 'btn'
```

```
        onClick = { () =>
```

```
SetCount ((count) => count + 1) {}
```

```
Count: {Count}
```

```
</button>
```

```
</div>
```

```
</p>
```

```
}
```

```
}
```

```
export default App
```
